// 01 - THE PROBLEM

Every Solana cycle plays out the same way.

T+0

A new token pumps.

Thousands of wallets pile in within minutes.
The chart prints green. Twitter wakes up.

T+1d

"Holders look organic."

Someone posts a screenshot. Nobody verifies.
Historical holder data is paywalled.

T+14d

Sub-\$100 wallets bleed.

The candle drips. Plankton exit silently.
Nothing on DexScreener shows it.

T+30d

Deployer dumps 60%.

Retail watches the candle fall. They never knew they could have seen it coming.

RUG

The signal was on-chain the whole time — in the holders, not the price. We built the panel that reads it.

// 02 / 10 - HOOK

THE PATTERN REPEATS

// 02 - THE LANDSCAPE

Three tools. All fail retail.

// CATEGORY 01

DexScreener

Birdeye

Price · Liquidity · Volume. Zero context on who holds the token. A whale can drain the pool and you only see it when the candle collapsed.

// THE GAP
A concentrated token looks the same as an organic one.

// CATEGORY 02

Helius

Dune

They have the data. Historical time-series locked behind \$4-10k/month enterprise plans. Unreachable for retail.

// THE GAP
Built for funds. Retail gets a price chart.

// CATEGORY 03

GMGN

Nansen

Influencer wallets only. Blind to the rest of the cap-table. The loud 1% is tracked — the other 99% never enters the dashboard.

// THE GAP
A whale lens isn't a holder lens.

Result: retail invests blind. 80% of supply can sit in five coordinated wallets — undetectable until the rug.

Three layers of intelligence.

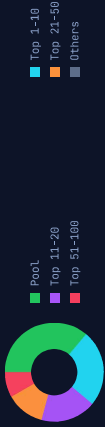

Price tells you what happened. Holders tell you what's coming. Two metrics nobody else publishes for free.

01

3 LIVE DISTRIBUTIONS

Computed daily with deltas at 10 · 70 · 140 · 300 · 600:

- Liquidity — pool + top clusters
- USD value — 7 brackets, +\$50k → <\$100
- Raw amount — 8 log brackets

02

7 MARINE TIERS

Wallets bucketed by USD held, with names everyone reads at a glance.

Whales-only is a coordinated trade. Whales + dolphins + shrimp is a real community.

03

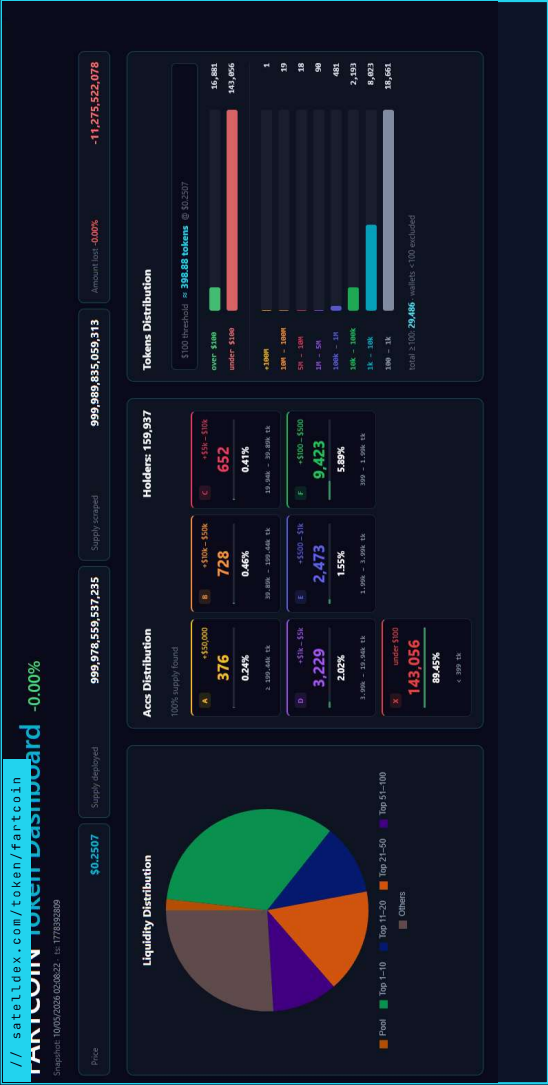

EXITED HOLDERS

Wallets with the ATA alive but balance at zero.

The cleanest signal of a token bleeding its base. No price chart shows it.

// 04 - IT'S BUILT · IT'S LIVE

// 05 / 10 · LIVE

ACTUAL SCREEN · satelldex.com

One token, the full picture.

// HEADER

KPIs in one row

Price · supply deployed · scraped · amount lost. Snapshot timestamp + run ID – auditable.

// THREE PIES

Liquidity · Accs · Tokens

Liquidity by cluster · USD brackets A-X (whale → plankton) · raw token brackets +100M → <1k.

// HISTORY

114 snapshots, normalized

Every metric over time. Row-level growth table with **[+N]** / **[-N]** deltas per snapshot.

// POOLS + HOLDERS

Main pool · top 100 · all

LAP auto-detected. Top pools ranked by USD across Raydium / Orca / Meteora. Holders with Top 100 / +\$100 / All toggles.

Every action, signed.

01

No email. No password.

Vote a token? Sign. Pay your sub? Sign. ed25519 via wallet-adapter, verified server-side with PyNaCl.

02

On-chain payments, validated.

USDG SPL or native SOL. Backend re-parses the tx, verifies the destination ATA owner, checks the amount with 5% drift tolerance. No Stripe.

03

Per-request signature.

Each call signs its own canonical message. 60s anti-replay. 10 sigs/min rate limit. Every valid signature logged for audit.

04

KOL referrals on-chain.

Each KOL gets a slug. ?ref=<slug> overrides the price and links subs to the referrer — verifiable from chain state.

Rate 3 / 10 in last 60s

Three conditions, finally aligned.

01

Solana DEX
at ATH 2025-26.

More new tokens, more rugs, more affected communities. 5-source aggregation is feasible at consumer pricing for the first time.

02

Wallet UX is
finally usable.

Three years ago, signing was a friction wall. With Phantom or Solflare, it's one tap. Mobile Wallet Adapter closed the mobile gap.

03

Post-rug retail
wants the data.

The people who lost in 2024-25 stopped believing "trust me bro." Cold-traffic users pay \$25/month before any paid acquisition.

// 07 - TRACTION

Live in production. Real data. Real subs.

// TOKENS TRACKED

19_{live}

Canonical via Targets table, Memes · AI · infra.
Hourly cron.

// SNAPSHOTS

1,797

Backfilled history. Every metric over time,
downsampled for charts.

// HOLDER ROWS

82M_{+ rows}

In MySQL 8 with proper indexes. Batch 1000 holders
/ POST.

// PAYING SUBS

#25_{/mo}

First subs from **cold traffic**, before any paid
acquisition.

// 09 - THE BET

Give Solana retail the same tools funds and whales have today.

On-chain. Auditable. Without the enterprise plan that today locks them out.
Built solo · no VC · no grant. If users pay the sub, the project lives. No synthetic runway.
No board pushing the wrong tradeoff. That's honest, and that's the bet.
